

# PRESS RELEASE

## **Array Graphics Launches IPS for Package Coding** *– Fresh Turnkey Stand-Alone Print Solution* *Specifically Designed for the Package Coding Industry*

Huijbergen, May 2007 – Array Graphics, European Master Distributor for inc.jet, Inc digital printing products using Hewlett-Packard TIJ 2.5 thermal inkjet technology, released details of the Company's new product, a stand-alone printer, designed specifically for use in the Package Coding Industry. **The new space-efficient turnkey print unit, named "IPS" (Industrial Print System), promises uncomplicated integration "on-the-fly" to previously difficult package coding applications, as well as operator-friendly design.** The Company will launch the IPS system to the European market in May 2007 at TOTAL, immediately followed by the East Pack 2007 Expo in New York in June 2007 for the US market.

All of inc.jet's products are founded on the mission of delivering clear, precise print in myriad applications, and the Company expects the new IPS system once again to deliver a solution to even the most demanding primary and secondary package coding requirements. The stand-alone unit offers numerous design features and hardware options, combined with a space-efficient yet robust design, enabling the system to fit practically anywhere, and eliminating the need for bulky alternatives.

"We're very excited about the possibilities this new product will open up for our current and future customers," Per Hellsund, President of inc.jet. "inc.jet solutions have been extremely effective within the Mailing/Graphics industry; now we're aiming to deliver smart, effective solutions for the Package Coding industry as well."

Gerrit Willems, general manager of Array Graphics sees many opportunities in package coding to replace continuous ink jet and label systems.

---

### **About inc.jet, inc.**
