

Industrial Print System (IPS):

The Complete Coding System.

The IPS system includes everything needed to make package coding and marking simple and productive - hardware, software, inks. All designed to work together seamlessly and proficiently.

Encoder & Sensor

Interfacing directly into the Print Controller, these compact sensors can detect speed and the position of packages.

Operator Interface:

A touch sensitive screen that allows the user to layout print jobs, start and stop the system and monitor statistics.

Print Controller

The main interface for the pens, sensors and encoders. Print Controllers can be daisy-chained together to create larger print systems

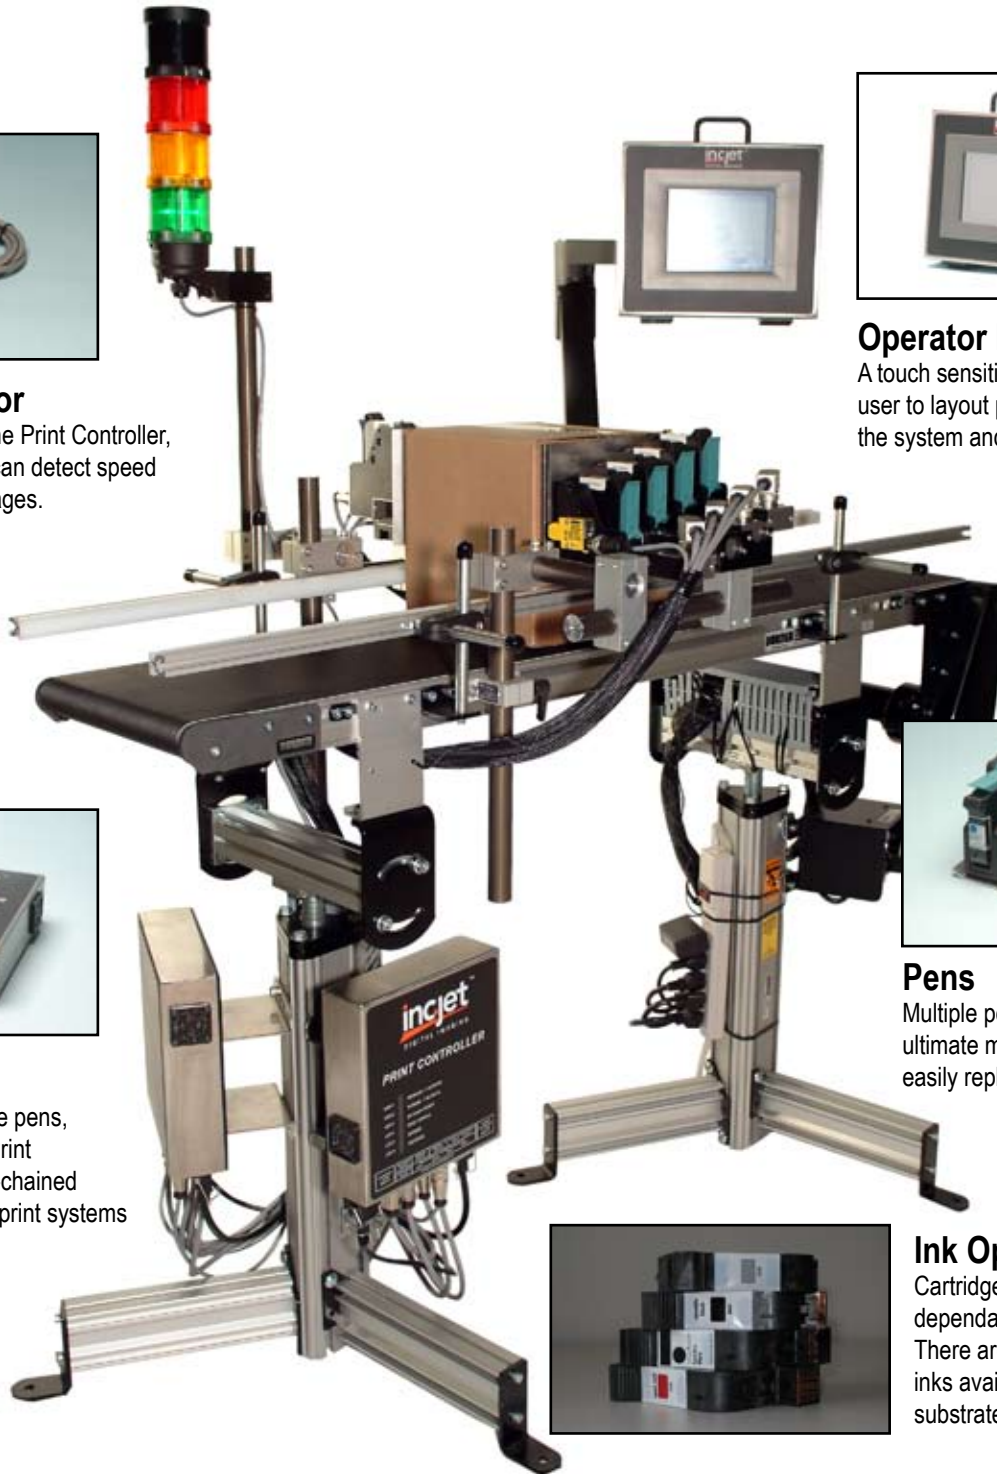

Pens

Multiple pens stall designs allow for ultimate mounting flexibility. Accepts easily replaceable, HP print heads.

Ink Options

Cartridge or bulk ink systems, dependant on usage requirements. There are a wide variety of different inks available to suit specific substrates.

Industrial Print System (IPS):

Package Printing Simplified.

Merge HP's proven technologies, inc.jet's enviable reputation for variable data printing and the need for a solid coding solution for the packaging industry and you get IPS (Industrial Print System).

IPS's industrial strength build, and high performance components, allows this turnkey print system to fit into virtually any manufacturing/packaging environment. And with an extensive range of inks available, there is practically no material that cannot be printed on clearly, quickly and efficiently.

Turnkey Coding System

Rugged mounting equipment, designed to fit into any environment and space, a wide variety of inks (bulk or cartridge based), control hardware and software and the finest print heads in the industry, all provided in a commercial off the shelf system.

- Ready to go print solution
- Hardware and software in one seamless solution

Simple Integration

IPS is painless to integrate into existing packaging lines. With industry standard mounting configurations and a design that takes up less room, IPS is a smarter alternative to bulky print systems.

- Mounts in any configuration
- Reduced size for limited spaces

Total Print flexibility

Whether, small or large characters, printing fixed images, lot and date codes, even variable data, IPS can do it all. Print heads that easily add on to expand print width, for jobs that require larger print areas. Add that to the widest range of inks to be had for printing on almost anything, from paper to foils, in black or in color, and you have the ultimate industrial print system.

- Variable and fixed data capability
- Print in black or in color

Enhancing Print Capabilities

IPS is a proven performer with a wide range of abilities. Just one of the many key differentiators for the time conscious package coding industry is IPS's bi-directional printing, allowing for simultaneous coding, front and back- why spend more on multiple printers, when IPS can do everything in one elegant system.

- Print front and back for simplified printing
- Money saving solutions
