

jet.engine's Flexibility and FRANCHINI's Modularity: A Perfect Match!

Through their European Master Distributor **Array Graphics**, US-based **inc.jet** has recently overcome another frontier in the Italian market by establishing a fruitful co-operation with **FRANCHINI&C Srl**, San Giuliano Mil.se, Italy. This company, founded in 1959, is known worldwide as a leading manufacturer of silk screen label printing equipment as well as a widely established reseller of other printing technology equipment and finishing machines. **FRANCHINI&C Srl** is a specialist in installing long industrial lines and **Array Graphics** found in them a valuable OEM, capable of assembling innovative ink jet systems as yet unheard of, ensuring the high quality standards they both are famous for.

Flexible, Adaptable and Uniquely Extendable

The majority of the solutions installed by **FRANCHINI&C Srl** are tailor-made printing lines, designed and assembled to satisfy each customer's particular production needs, swiftly responding to changing market needs. This gives the equipment – be it flexo, silk screen, letterpress or offset – an irreplaceable quality: its modularity. In this context **Array Graphics'** solutions fit in very well, given the unbeatable application flexibility they offer. The dynamic user-friendly GUI software gives the operator easy access and control to the systems. The wide range of printing equipment combinations easily secure the buyer's attention (they can be moved, re-assembled and/or replaced in no time). Moreover, **Array Graphics' jet.engine** is to date the only system that can be extended to more than 4 imagers in line.

Over 20 million pieces high-speed ink jet printing on a FRANCHINI flexo print system within 4 months with excellent technical results

Inks for All Choice

The powerful combination of software and hardware becomes even more striking when matched to the ink richness. There are various types of cartridges, responding to all needs from single ones to re-fills to tanks solutions, next to an unmatched variety of ink colours and qualities. This is fostered by constant research aimed at providing always new ink solutions. This allowed Array Graphics to become immediately marketable in a country like Italy where the most widely used drying system is UV curing. For this purpose TrueFlex ink was devised, meeting market demands and attracting more and more customers towards this equipment.

Successful Applications and Satisfied Customers

FRANCHINI&C Srl engineers recently devised a very clever bracket to support a full 11-imager installation placed on a high-speed flexo machine used for security applications by Pasqui Srl, Città di Castello, Perugia in Italy. This company specialises in scratch-off lottery tickets and they had their **jet.engine** printing system installed 4 months ago. Today, Mr Giuseppe Pasqui, the company's CEO, confirms that the ink jet system has become central to their production, being used twice a week on a regular basis. Variable data production reached over 20 millions pieces since installation and the customer is very satisfied, given the excellent technical results achieved by this system.

Innovative Printing Solutions

FRANCHINI&C Srl found in **Array Graphics** a perfect partnership, meeting the wide range of application requirements their clientele represents. They share with their foreign partner a thirst for knowledge seeking as well as continuous strain towards the creation of always more innovative and updated printing solutions.
